Chapter 1

Some of the major sources of biographical information are listed below; others have been mentioned in the section. The *Dictionary of National Biography* and *Skrimgeour's History of the Physiological Society* (Skrim. *J. Physiol.*, 1971) have been regularly consulted for information on Sherrington's contemporaries.

Chapter 2

The classical books and papers on anatomy and physiology, referred to in the text, can easily be traced from the few references given

below. A bibliography of Sherrington has been compiled by the late Professor John Fulton. This has been included by Denny-Brown in *Selected Writings*, referred to below. It was published and extended by Lord Cohen of Birkenhead in his lecture to the Royal Society.

Chapter 3

For the early development of Sherrington's concepts one of the best sources is his own memorial lecture in Schäfer's *Textbook of Physiology*, vol. 2. Pentland, London and Edinburgh, 1900. It contains in addition a surprising lecture in comparative biology, *Including the mind organs, as functional working*, and can justly be called a piece of literature scholarship.

Chapter 7

The bibliography of Sherrington's work on tone and plasticity will find it described in the papers published in the *Short J. Exp. Physiol.* between 1910 and 1928 (see Bibliography, Appendix).

More recent studies have been reviewed by Brooks (Oxford). The gamma-rubrals work is of a later date and was first extensively summarized by the author in his Silliman Lectures, quoted above. The two Sprague's quoted below present later developments in both anatomy and physiology.
